

Merely conjuring the healed world always carries the risk of quietism and mystical authoritarianism. Steering clear of these requires implementing the logic of continuous unfolding against the will to reification... The plants can lead the way, as their world remains unfixed, indeterminable, undifferentiated: they still live in the world of continuous unfolding. The will to reification rages everywhere against them with all its might, yet they still resist.

From the author of *Breaking the Alphabet*, this is a scholarly but not academic treatise on the substrata of the status quo, with ideas on how to break ourselves out of the continuing reification of every aspect of our lives.
